

WebFax

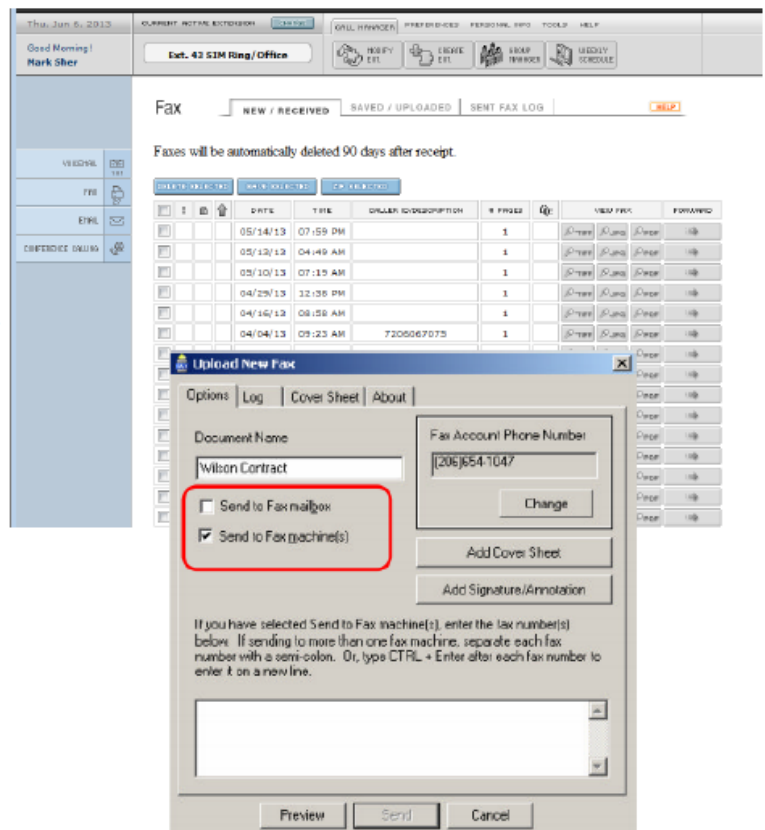

Your Virtual, Paper Free Fax Service

WebFax is a "virtual" fax service that allows you to receive and manage your faxes via the web. It also gives you the ability to transmit faxes right from your Windows-based PC. Senders simply dial your WebFax number from their fax machine, as they normally would. You are notified of new faxes via email, including on wireless devices, and you can receive an attached PDF of the fax with the notification. You may view, print and forward faxes to any email address or fax machine. From your Windows-based PC, you can also fax any document to one or more fax machines, as well as to your personal mailbox.

What's Included:

- Dedicated fax number for each WebFax account
- Use it personally or with a group
- Faxes are received and stored in the online fax mailbox
- Automatically forward faxes via email as a PDF to one or more people
- Fax any document from a computer
- Fax to multiple numbers at once
- Create a cover page
- Annotate and sign any document
- Receive fax transmission alerts
